Project Authorization

ERM: _____

FP&A: _____

Executive Summary

This request is for the approval of $146K for structural repairs identified during annual underground inspections in 2017.

The main goal of this project is to rebuild or replace structures that are unsafe or no longer meet specific system needs. Structures to be replaced will be identified through regular inspection programs and subsequent evaluations by civil engineers. On an annual basis the Company prioritizes repairs for emergent issues.

Technical Justification

Project Need Statement

Structural repairs are required to ensure the safety of workers and the public. Safety would be negatively impacted if structural failures were not addressed. This is done by rebuilding or replacing structures that are unsafe or no longer meet specific system needs. Typical structures include concrete manholes, service boxes, transformer vaults and duct structures. The most common mode of structural failure is in the roof and/or cover of underground structures. These components take the majority of mechanical stress from above-ground traffic. Other less common failure modes include age/obsolescence of materials and previous but undiscovered damage done by past excavation for road or utility work.

Project Objectives

Reduction in risk associated with public safety and liability, improved worker safety from elimination of job-site structural hazard, quicker response to restoration activities.

Project Scope

Repair, replace, or remove structural diffiencies as identified through annual inspections.

Major Material

- Vault roofs
- Vault grates
- Roof beams
- Concrete repairs
- Manhole covers
- Service boxes

Background / Justification

This project will address underground structures that need to be repaired, replaced, or removed for the betterement of the system.
