80224074	BC - CD01576 - 47N3 Overload - Inst	Southwest Hartford 47Southwest Hartford 47N3 is a 23 kV circuit which supplies 3,530 customers in West Hartford. When 47N3 picks up the 47N7 under contingency, it exceeds its normal and emergency rating by 118% and 100% respectively. For loss of the 4A7, the 47N3 also exceeds the normal rating by 104%. Based on Eversource engineering standard, the 47N3 must remain at or below 100% of its normal rating under contingency. To address this issue, project CD01576 will reconductor the existing 500 PILC UG Cu getaway cable to 1000 KCMIL Cu from the substation breaker to riser pole 4754 on Merrill St. By upgrading the existing getaway to 1000 KCMIL Cu, the 47N3 load will remain at or below its normal rating for all contingency operations. This project received Initial Funding approval at the May 27, 2021, CTPAC meeting for $264K. The Full Funding request is for actual costs of $622K or an increase of 135%. A scope change was required to replace two additional sections of cable on New Park Ave. As part of replacing the cable a wye splice also needed replacement on New Park Ave. There was not enough room in the splicing bay of the existing manhole to make up the splice since the feed was PILC cable and would require a transition splice to hook up to the new wye splice. The wye splice was relocated to an adjacent manhole, which required one new section of 500 kcmil CU cable. This required replacing the final two pieces of 500 kcmil CU PILC going from New Park back to the switchgear in the substation driveway to eliminate all the PILC cable on this feeder. Outside services there was estimated at $100,649 for the Preliminary estimate versus $229,547 for the Final Estimate or a 128% increase. The biggest driver in this difference was the underground contractor cost for this project which was $228,900. Material was estimated at $55,283 for the ENG versus $200,100 for the ACT or a 262% increase. The scope change drove up material costs.	Rents + Leases-J00	107010	1
