Date Filed: September 21, 2026

Witness: Amparo Nieto
Request from: Public Utilities Regulatory Authority

Question:

(MCOSS) Application, Ex. CLP-MCOS-2, p. 12. Explain the variance in the installed service costs (line 16) between Rates 1 & 7 and Rate 5. Provide the underlying cost support that demonstrates the variance between the rate classes.

Response:

The service cost analysis was based on a review of Company service drop installations for all customer classes, during the period 2021-2026. The analysis demonstrated a variance between Rates 1 & 7 and Rate 5 costs of installation, such that Rate 5 service drop installation cost was higher both for the Overhead and the Underground connections. The detailed calculation is included in OCC-365, Attachment 37.
