Date Filed: October 13, 2026

Witness: Marc J. Richards and Gary A. Iadarola
Request from: Public Utilities Regulatory Authority

Question:

(ENVIRONMENTAL REMEDIATION) Application, Ex. CLP-ENV-1, pp. 21–23.
Regarding Site #5 Rockville Former Manufactured Gas Plant, the Company states that several distribution, transmission and gas related construction projects were completed at this site. Explain whether any of the remediation costs have been allocated to Eversource's gas, transmission, or other operating subsidiaries.

Response:

Planned distribution, transmission, and gas related construction projects were completed at this site with capital funding associated with the specific operating subsidiary. Soil, concrete, and building materials that are planned for removal as part of the construction design are typically characterized for proper on-site or off-site waste management purposes in advance of the work. When polluted, contaminated, or hazardous materials are encountered as part of the planned construction activities (additions or removals), the costs associated with proper on-site handling or abatement and off-site waste disposal are allocated to the established construction project work orders, accordingly. Planned environmental work performed in support of advancing the MGP site toward regulatory closure, whether it be characterization/investigation or remediation, is allocated to the established "reserve".
