7552 Notes

7553 *Consistent with the Final Decision of Docket 19-01-52RE01, Order No. 15, issued on May 11, 2022, Eversource began maintaining detailed records of costs attributed to the regulatory asset, including billable and non-billable make ready costs. Where make-ready costs are classified as non-billable, the underlying basis for that determination is documented. If work was performed prior to May 11, 2022, the Company has noted "Prior to 5/11/2022" as there were no reasons documented at that time. For lines noted as "PRIORITY", these represent non-billable make ready work performed under expedited timelines established by the PURA approved pole attachment process.
