CS002391	Williams 9L – Network Monitoring Sy	This project is the substation component of installing the Digital Grid network remote monitoring system. This project in conjunction with CD00828 and CD00948 will prolong the useful life of the network protector and transformer by allowing the system to notify System Operators when conditions such as network protectors pumping or cycling, loss of protector pressure and the presence of water occurs. Overall, these projects are focused on enabling Eversource to increase network protector's reliability and defer network protector's major maintenance from a 2-year cycle to a 4-year cycle, thus reducing resource impact on Operations. This project involves the following work within the Williams 9L fence: installation of 4 coil sensors (one on the getaway cable of every network feeder), installing a receiver cabinet in the control house, installing a DNP interface, commissioning the system, 2 years of web portal access, and 2 years of engineering support. This project was approved on 11/17/2016 for $31,000 with an with an overall estimate of $306,255. Following detailed design, the total project request is $297,203. CS002581	SW Hartford 47N Replace 9 OCBs	Southwest Hartford 47N substation in Hartford, CT is a 115-23kV substation built in 1973. While a few pieces of equipment have been replaced over the last 45 years, most equipment is original. There are nine (9) 23kV oil circuit breakers that need to be replaced, in addition to the circuit breaker isolation switches and electro-mechanical relays used for transformer, bus and feeder protection. Besides the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal/bird protection for reliability purposes. In addition to these equipment replacements, 115kV Circuit Switchers need to be added for the two transformers to address a transformer switching restriction that prohibits energizing or de-energizing the two 48/64/80 MVA transformers with the 115kV disconnect switches. CS009048	DSCADA LTC Controls Upgrade	Furnish necessary engineering and design to replace existing radio-controlled Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System at various Eversource Connecticut substations. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. The DSCADA signal will be transmitted via radio from the control house to the LTC receiver, to avoid the expense of adding additional conduit, if no conduit is available. If conduit is available, the devices will be connected via fiber cable.	Allocations Roll up-Z00	107010	1.0000000
CS009085	Oxford 26N DSCADA LTC Contrs Up	Project Scope: Oxford 26N Furnish necessary engineering and design to replace existing radio-controlled Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. Provide additional LTC control capability for the new DSCADA system so the voltage of individual LTCs can be raised/lowered by the SOC to satisfy field conditions. Ability to provide the tap position of the LTC and to remotely turn off regulation so the LTC does not react during switching.	Allocations Roll up-Z00	107010	1.0000000

In order to have mobile radios to continue supporting Distribution Automation in CT, a last time buy of radios is needed. A budget of $1.2M was set aside for this purpose as a short-term mitigation to keep the system in operation till a new replacement system is identified as part of the Field Area Network Strategy.
