CS000581	Install Feeder Position (Fusion Sol	Tunnel 12S - Install a new 23kV feeder (12S6) which will serve as an express feed to the new Fusion 20 MW Photovoltaic Distributed Generation. The new feeder will require the addition of one 23kV Tie breaker, three group-operated disconnect switches, PTs and one feeder recloser.	Employee Expenses-EE0	107010	1
CS000691	Maple 24-Remove Substation	Maple 24 - Remvoe all equipment, foundations, fence and trap rocks. All equipment will be scrapped except for the transformers (24-1X and 24-2X). Both transformers will be evaluated for possible use as system spare, otherwise they should both be scrapped. The substation site should be cleared and turned over to Real Estate for sale.	Employee Expenses-EE0	108030	1
CS000841	Replace 3X Transformer	Manchester 3A - Replace the 3A-3X transformer. The existing 115kV Wye to 22kV Delta 45 MVA transformer will be replaced with a new 115kV Delta to 23kV Wye 60 MVA transformer. The existing 3A-3X power transformer as well as the associated 3A-3Y grounding transformer will be removed and scrapped.	Employee Expenses-EE0	108030	0.06805043
CS000841	Replace 3X Transformer	Manchester 3A - Replace the 3A-3X transformer. The existing 115kV Wye to 22kV Delta 45 MVA transformer will be replaced with a new 115kV Delta to 23kV Wye 60 MVA transformer. The existing 3A-3X power transformer as well as the associated 3A-3Y grounding transformer will be removed and scrapped.	Employee Expenses-EE0	107010	0.93194957
CS001081	Moosup 19Y-Remove Substation	Moosup 19Y - Remove the substation. All of the equipment will need to be removed, including the foundations and the 19Y-1X transformer will be scrapped. The fence wnd trap rock will remain and the site will be kept because a pole line crosses the small site.	Employee Expenses-EE0	108030	1
CS001421	Battery Upgrades	South Windsor 14L - UPgrade the existing battery set to include capacity for the additional Cip v5 equipment.	Employee Expenses-EE0	107010	1
CS001524	Recloser Automation	East Bantam 19U - Install new station FORM 6 Reclosers on Eversource CT feeders to address Recloser Automation. This project also includes installation of a DSCADA communications system that will allow the SOC to remotely apply the control fast-trip feature prior to commencing any live-line feeder work. The overall project includes complete installation of all necessary protection settings, control and communications devices.	Employee Expenses-EE0	107010	1
CS001526	Recloser Automation	Cornwall 37J - Install new station FORM 6 Reclosers on Eversource CT feeders to address Recloser Automation. This project also includes installation of a DSCADA communications system that will allow the SOC to remotely apply the control fast-trip feature prior to commencing any live-line feeder work. The overall project includes complete installation of all necessary protection settings, control and communications devices.	Employee Expenses-EE0	108030	0.14502136
CS001526	Recloser Automation	Cornwall 37J - Install new station FORM 6 Reclosers on Eversource CT feeders to address Recloser Automation. This project also includes installation of a DSCADA communications system that will allow the SOC to remotely apply the control fast-trip feature prior to commencing any live-line feeder work. The overall project includes complete installation of all necessary protection settings, control and communications devices.	Employee Expenses-EE0	107010	0.85497864
		Furnish necessary engineering and design to create a 23kV source at Mansfield 12J substation to replace the existing 27.6kV transformer and associated feeders. Work includes the following installation: •One 69-115/23kV 62.5MVA (12J-4X) transformer •One new lineup of 23kV Double Bus Metaclad Switchgear •Three 115kV circuit switchers •One 115kV Motor Operated Disconnect Switch •Replacement of existing electromechanical relays for the 12J-1X, 12J-2X transformers with new microprocessor based SEL relays •Installation of 1 12J-3S, 12J-4S, 12J-3H, 12J-4H transformers •Installation of six 115kV cable potheads [(2) cable pothead structures] and arresters •Approximately 1500 ft. total 115kV XLPE cable 500 ft. per phase •Install new ground grid to cover the expended fenced area •25kV power cables between switchgear and riser poles (located outside of the substation fence)t •Required conduits and foundations for new equipment			
CS001661	Mansfield 12J Install 12J-4X transf		Employee Expenses-EE0	107010	1
CS001751	Install New Feeder (DG)	Tracy 14M - Establish a new feeder position 14M13 for a DG project associated with the RES Americas' 20MW PV DG project. The new 14M13 overhead feeder position will be between 14M-14T-6 and 14M-15T-6 bus switches. A new vacuum 23kV circuit breaker 14M13-2 will be installed using steel spans on the existing foundation, a new group operated disconnec twitch14M13-5, a new set of PTs and arresters will also be installed.	Employee Expenses-EE0	107010	1
CS001951	South MeaSpare Transformer Assembly	Spare Transformer Assembly - Purchase, assemble, fill and test a system spare transformer for storage at the South Meadow Storage Facility in Hartford, CT. The new system spare will be 60 MVA, 115-23kV, 14.2% impedance. Catalog ID 465287. This new spare will take the place of the existing spare (Catalog 443766) which will be moved from the SOuth Meadow Storage Facility to Tracy 14M substation in September.	Employee Expenses-EE0	107010	1
CS002816	DC Battery Voltage Monitoring	Bloomfield 3B - Implement station DC Battery Voltage Monitoring as a backup system to the AT10 charger internal alarm system.	Employee Expenses-EE0	107010	1
CS005951	PI Vision Transformer Monitor Repl	This project will replace transformer monitoring displays used by the substation technical engineering group to monitor asset health real time by visualizing data collected using online equipment monitors. An external vendor will be funded to create three displays in PI Vision, an existing visualization tool on the Eversource network. A new PI Asset Framework database will be developed. The structure of the database includes an Overview page and nine sub-pages. The objective of the Overview page is to provide users a quick look at the health of each transformer and to highlight via color coding the potential issues to be investigated further. CS001341	Danielson Turbine 15C-Remove Deener	This project is seeking a partial funding of $725K to complete equipment removals and environmental testing for the deenergized substation Danielson Turbine 15C substation located at 75 Athol St, Dayville CT. The substation was deenergized in 2017 following Distribution Line project CD00588. Substation equipment removals were not completed following the substation deenergization. There will no longer be an Eversource use for the property and Real Estate indicates the property will be evaluated for disposition.	Employee Expenses-EE0	108030	1

CS002631	PILOT PROG FEEDER FAILURE DETECTION	To purchase an add-on software package to PQView called FaultPoint Set up a database link to our exiting saved relay events thru IT that would enable the use of Synergy models to populate algorithms to calculate fault locations based on system parameters and protection relay event logs This proposal includes the cost to fund the purchase and set up the required support from IT and database storage space in order to store system data for software analysis. Project Objectives To identify, locate and repair underground faults within minimal time, limiting customer outage times. This will improve overall system response times and minimize repair times having a direct effect on SAIDI and CAIDI	Employee Expenses-EE0	107010	1

CS002241	Sandbank 30F S/S – Remove Substatio	French necessary engineering and design to retire the Sandbank 3IF substation. Removal of equipment including transformer, recloser, switches, etc. Also remove the fence and trap rock. Remove all foundations to below grade or remove completely, if practical. Perform environmental remediation as required. Loam and seed the site for grass growth to minimize erosion. Turn the site over to the Real Estate Department for sale with the provision that an easement is obtained for an overhead line. The 500 /25 transformer will be put in inventory and then relocated to Judd Brook 32B for installation there (reference Project 4201180). All other equipment will be scrapped. CS009048	DSCADA LTC Controls Upgrade	Provide engineering and design to upgrade existing static control load tumover and Tap Changer (LTC) Voltage Reduction Systems with a DSCADA controlled LTC Voltage Reduction System at sixteen Eversource Connecticut substations. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. The DSCADA signal will be transmitted via radio from the control house to the LTC location, to avoid the expense of adding additional conduit, if one conduit is available. If conduit is available, the devices will be connected via fiber cable.	Employee Expenses-EE0	107010	1

CT17D036	CONVEX - Lake Road ARDs	CONVEX has requested a new ARD from the Lake Rd generator to CONVEX. ISO would also like to upgrade their existing ARD to the Generator to make use of the fiber at Lake Rd. At the same time, we will upgrade the existing substation ARD to CONVEX over the new AVA-E IP backhaul equipment. This work order will be for CL&P equipment needed at Berlin to provide 4 new terminations that can make use of the corporate network and fiber to TOCA and TOCB from Lake Rd. SS and Gen. CS002841	Carmel Hill Add 2nd Xfmr + SWGR	This project proposes the addition of the second 115/23kV/47MVA transformer (T4125), with associated switchgear. Carmel Hill 115 in Woodbury, CT is a 115/23kV fabrication with one (1) distribution transformer and one (1) switchgear that has three (3) feeders. A second distribution transformer and switchgear are required to improve reliability by increasing the contingency load-carrying capability of the substation and feeders. Eversource's "SYSPLAN-HH Bulk Distribution Substation Assessment Procedure" specifies the need for a second transformer to keep the substation loading below 75% of the existing transformer's nameplate rating	Employee Expenses-EE0	107010	1

CS000731	Seymour 20F-Remove Substation	Seymour 20F - Remove most of the equipment and foundations. Some necessary equipment will remain as the 11N83 and 11N84 circuits will continue to pass through the site. The 11N83 regulators will also remain. The transformer (20F-1X) will be evaluated for possible use as system spare, but most likely it will be scrapped. The substation is scheduled to be de-energized by 12/31/15. 		Project Scope: Oxford 26N Furnish necessary engineering and design to replace existing radio-controlled Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. Provide additional LTC control capability for the new DSCADA system so the voltage of individual LTCs can be raised/lowered by the SOC to satisfy field conditions. Ability to provide the tap position of the LTC and to remotely turn off regulation so the LTC does not react during switching.

		Furnish necessary engineering and design to create a 23kV source at Mansfield 12J substation to replace the existing 27.6kV transformer and associated feeders. Work includes the following installation •Remove the 12J-3X transformer and replace with One (1) 69-115/23kV, 62.5 MVA Transformer •One 115kV circuit switcher (Candlestick) (12J-3X1-2) •Install 23kV steel structure and bus to make connection between new transformer and switchgear •Remove all 27.6kV equipment including low side transformer breaker, feeder breakers, and bus structures •Required conduits and foundations for new equipment

SUBFLOOD	SUB FLOODING & CLIMAGE CHANGE	UCONN 2ND AMENDED AND RESTATED RESEARCH PROJECT(S) EVALUATE SS VULNERABILITY OF FLOODING DURING CLIMATE CHANGE SCENARIOS. ASSET HYDROLOGICAL MAPPING, INUNDATION MODEL AND HYDROLOGICAL DAM ROF TOOL This work order was created to accept the charges for the Substation curriculum development project which is a piece of the overall electric curriculum development project (CTMTRTRN) for Field Training. Per Alex Chasson-Colebourn , the vendor (Index AR) quote is $1,400,000 and the vendor (Mosaic) quote is $1,566,000. The internal labor cost is estimated to be $33,333 each month for 18 months. The costs (direct and indirect) will be distributed according to the PAF $4,045,649. CT = 35% = $1,415,977 EMA = 35% = $1,415,977 NH = 20% = $809,130 WMA = 10% = $404,565	Employee Expenses-EE0	107010	1

CS003921	Beacon Falls 11N Replace 1X & 2X Tr	The 2032 Beacon Falls load forecasted peak is 60MVA. The existing load and future load growth would require replacement of both 46.7MVA transformers. Installation of a BESS to shave the peak load 2.5MW will defer the cost of these capital expenditures for a minimum of ten (10) years.	Employee Expenses-EE0	107010	1
CS002814	DC Battery Voltage Monitoring	Implement Station DC Battery Voltage Monitoring as a Backup System to the AT10 Charger Internal Alarm System	Employee Expenses-EE0	107010	1

CS000721	Guildford 29F-Remove Substation	Guilford 29F - Remove all equipment and foundations. All equipment will be scrapped except for the transformers (29F-1X and 29F-2X) which will be evaluated for possible use as system spare. It has not been determined yet if the site will be sold or kept (TBD). The substation is scheduled to be de-energized by 12/31/17.	Employee Expenses-EE0	108030	1

CS003821	Southington 4C Add 8X Transformer	The Southington 4C-5X transformer is 47 years old and 4C-6X is 17 years and both have no known issues at this time. Due to the age and condition of the transformers it is preferred to defer the capital expenditure of replacing both transformers for 10 years (2022-2032). This initial funding request is to evaluate the potential options for resolving this need	Employee Expenses-EE0	107010	1
