CS002241	Sandbank 30F S/S – Remove Substatio	Permit necessary engineering and design to retire the Sandbank 30F substation. Remove all equipment including transformer, switches, switchers, etc. Also remove the lines and steel poles. Remove all foundations to below grade or remove completely, if practical. Perform environmental remediation as required. Loosened sand the site for grass growth to minimize erosion. Turn the site over to the Real Estate Department for sale with the provision that an easement is obtained for an overhead line. The 300 CK transformer will be put in inventory, and then relocated to Judd Brook 32B for installation there (reference Project #201358). All other equipment will be scrapped. CS009048	DSCADA LTC Controls Upgrade	Install secondary engineering and design to replace existing relay and control for Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System at various Eversource Connecticut substations. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. The DSCADA signal to lift the transmittal via radio from the control house to the LTC receiver, to avoid the expense of adding additional conduit, if no conduit is available. If conduit is available, the devices will be connected via fiber cable.	Fees + Payment - FP0	107010	1

CS002841	Carmel Hill Add 2nd Xfmr + SWGR	This project proposes the addition of the second 115/23kV/47 MVA transformer (11L2X), with associated switchgear. Carmel Hill 11Kv Woodbury, CT is a 115/23kV/Substation with one (1) distribution transformer and one (1) switchgear that has three (3) feeders. A second distribution transformer and switchgear are required to improve reliability by increasing the contingency load carrying capability of the substation and feeders. Eversource's "TPD-PLAN-010 Bulk Distribution Substation Assessment Procedure" upsells the need for a second transformer to keep the substation loading below 75% of the existing transformer's nameplate rating. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. Provide additional LTC control capability for the new DSCADA system so the voltage of individual LTCs can be raised/lowered by the SOC to satisfy field conditions. Ability to provide the tap position of the LTC and to remotely turn off regulation so the LTC does not react during switching.	Fees + Payment - FP0	107010	1

FRADTID01	FRAD Installation CT	This project will be covering the installation of new FRAD equipment in Berlin and Mass Avenue Data Centers. The FRADs take RS-232 serial circuits and transports them in frame relay packets. Frame relay, combined with the RS-232 serial connection and the Multiprotocol Label Switching (MPLS) pseudo wires, are the chosen solution to transport SCADA to multiple data centers simultaneously. This project is in coordination with the eECS project	Fees + Payment - FP0	107010	1

		This project is the substation component of installing the Digital Grid network remote monitoring system. This project in conjunction with CD00828 and CD00948 will prolong the useful life of the network protector and transformer by allowing the system to notify System Operators when conditions such as network protectors pumping or cycling, loss of protector pressure and the presence of water occurs. Overall, these projects are focused on enabling Eversource to increase network protector's reliability and defer network protector's major maintenance from a 2-year cycle to a 4-year cycle, thus reducing resource impact on Operations. This project involves the following work within the Williams 9L fence: installation of 4 coil sensors (one on the getaway cable of every network feeder), installing a receiver cabinet in the control house, installing a DNP interface, commissioning the system, 2 years of web portal access, and 2 years of engineering support. This project was approved on 11/17/2016 for $31,000 with an with an overall estimate of $306,255.

		Southwest Hartford 47Southwest Hartford 47N3 is a 23 kV circuit which supplies 3,530 customers in West Hartford. When 47N3 picks up the 47N7 under contingency, it exceeds its normal and emergency rating by 118% and 100% respectively. For loss of the 4A7, the 47N3 also exceeds the normal rating by 104%. Based on Eversource engineering standard, the 47N3 must remain at or below 100% of its normal rating under contingency. To address this issue, project CD01576 will reconductor the existing 500 PILC UG Cu getaway cable to 1000 KCMIL Cu from the substation breaker to riser pole 4754 on Merrill St. By upgrading the existing getaway to 1000 KCMIL Cu, the 47N3 load will remain at or below its normal rating for all contingency operations. This project received Initial Funding approval at the May 27, 2021, CTPAC meeting for $264K. The Full Funding request is for actual costs of $622K or an increase of 135%. A scope change was required to replace two additional sections of cable on New Park Ave. As part of replacing the cable a wye splice also needed replacement on New Park Ave. There was not enough room in the splicing bay of the existing manhole to make up the splice since the feed was PILC cable and would require a transition splice to hook up to the new wye splice. The wye splice was relocated to an adjacent manhole, which required one new section of 500 kcmil CU cable. This required replacing the final two pieces of 500 kcmil CU PILC going from New Park back to the switchgear in the substation driveway to eliminate all the PILC cable on this feeder. Outside services there was estimated at $100,649 for the Preliminary estimate versus $229,547 for the Final Estimate or a 128% increase. The biggest driver in this difference was the underground contractor cost for this project which was $228,900.			
80224074	BC - CD01576 - 47N3 Overload - Inst	Material was estimated at $55,283 for the ENG versus $200,100 for the ACT or a 262% increase. The scope change drove up material costs.	Fees + Payment - FP0	107010	1

80306781	Still River 55G New Distru substati	Still River 55G - The initial funding request of $7178K is to develop a new Bantville 29/ 2.4/ 34.5/ 4.16kV/ 28kV bulk station which will, in part, replace the existing Bantville distribution station in Torrington, CT. The existing Bantville 29F distribution station will then be decommissioned after completion of the new station. This project will include two (2) 115kV transmission circuits from Wattagan Junction (17 miles south of existing the Bantville 29F substation), proposed in an overhead (OH) design in an existing right of way (ROW) to the vicinity of the existing distribution station, depending on the location of the new substation. The transmission and distribution assets will be installed separately at the work order level.	Fees + Payment - FP0	107010	1

CS002581	SW Hartford 47N Replace 9 OCBs	Southwest Hartford 47N substation in Hartford, CT is a 115/26kV substation built in 1975. While a few power transformers have replaced over the last 47 years, most equipment is original. There are nine (9) 26kV oil circuit breakers that need to be replaced, in addition to the natural breaker isolation switches and electromechanical relays used for installations. See attached presentation. Breaks the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal/bird protection for reliability purposes. In addition to these equipment replacements, 47HV Circuit Switchers need to be added for the two transformers to address a transformer switching transient issue that prohibits energizing or de-energizing the two 40/53/66 MVA transformers with the 47HV disconnect switches.
