CS002581	SW Hartford 47N Replace 9 OCBs	Southwest Hartford 47N substation in Hartford, CT is a 115-23kV substation built in 1973. While a few pieces of equipment have been replaced over the last 45 years, most equipment is original. There are nine (9) 23kV oil circuit breakers that need to be replaced, in addition to the circuit breaker isolation switches and electro-mechanical relays used for transformer, bus and feeder protection. Besides the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal bird protection for reliability purposes. In addition to these equipment replacements, 115kV Circuit Switchers need to be added for the two transformers to address a transformer switching restriction that prohibits energizing or de-energizing the two 40/44/56 MVA transformers with the 115kV disconnect switches	Joint Line Billing-JL0	107010	1

		A project authorization for $19,994,000 is being requested to fund the IT Scope of Work to support the construction of a new CT Distribution System Operation Center (SOC) at the existing Windsor Facility. The new Windsor SOC will be designed like the Mass Ave Control Room to support a physical layout and system visualization tools that encourage communication and visibility between desks. This model has been identified as an industry best practice. Once constructed, the new Windsor SOC will improve our operational efficiency, meeting NERC-CIP best practices. The audio and video display systems will increase operational awareness and efficiencies to include a Human Performance centric design needed to operate the modern distribution system and the distribution grid of the future. Additionally, the video wall display boards will enhance overall awareness by leveraging current and new graphical user interfaces as they become available; this will enhance operations ability to assess and analyze system events. This PAF scope of work includes the purchase, installation, and configuration of Computer, Audio-Visual, and KVM (Keyboard, Video, and Mouse) equipment which must be purchased to outfit the SOC with technology needed for system operations.

		Berlin - ATC - Roof Railing Installation			
F2411023	Berlin - ATC - Roof Railing Install	Safety concerns have been raised about the existing railing system on the roof of the ATC Garage. This project will install a compliant railing system to mitigate the potential danger associated with working near the edge of the roof.	Joint Line Billing-JL0	107010	1
