Remove all equipment including transformer, recloser, switches, etc. Also remove the lines and trap rock. Remove all foundations to below grade or remove completely, if practical. Performe treatment/remediation as required. Assessed cost of the site for grass, growth to minimum standard. Turn the site over to the Real Estate Department for sale with the provision that an assessment is obtained for an overhead line. The 30F-3X transformer will be put in inventory and then relocated to build Bank 32R for installation there (reference Project #203350). All other equipment will be scrapped.	Labor-L01	108030	1
CS002391	Williams 9L – Network Monitoring Sy	This project is the substation component of installing the Digital Grid network remote monitoring system. This project in conjunction with CD00828 and CD00948 will prolong the useful life of the network protector and transformer by allowing the system to notify System Operators when conditions such as network protectors pumping or cycling, loss of protector pressure and the presence of water occurs. Overall, these projects are focused on enabling Eversource to increase network protector's reliability and defer network protector's major maintenance from a 2-year cycle to a 4-year cycle, thus reducing resource impact on Operations. This project involves the following work within the Williams 9L fence: installation of 4 coil sensors (one on the getaway cable of every network feeder), installing a receiver cabinet in the control house, installing a DNP interface, commissioning the system, 2 years of web portal access, and 2 years of engineering support. This project was approved on 11/17/2016 for $31,000 with an with an overall estimate of $306,255.	Labor-L01	107010	1

CS002471	STEPSTONE 35L XFMR & PCE INSTALL	Furnish necessary engineering and design to install new PLC sensors on the B-Phase of the following three (3) underground feeder getaway cables: 1C04, 1C05, and 1C07. The sensors' wires will be routed from each of the three feeder cubicles on the existing control wire-tray to the network monitoring cabinet which will be installed inside the control house and it will be connected to the Ethernet switch inside the CIP cabinet. CS009048	DSCADA LTC Controls Upgrade	Southeast Hartford 47N substation in Hartford, CT is a 115/23kV substation built in 1973. Within the power of equipment have been replaced over the last 40 years, most equipment is original. There are also (8) 1947 oil circuit breakers that need to be replaced, in addition to the critical feeder isolation switches and electromechanical relays used for transformer, bus and feeder protection. Besides the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal bird protection for reliability purposes. In addition to these equipment replacements, 1T47 Circuit Switcher needs to be added for the two transformers to address contingency overlaps, that prohibit energizing or de-energizing the two 40/60/80 MVA transformers with the 1T47 disconnect switches. CS002631	PILOT PROG FEEDER FAILURE DETECTION	To purchase an add-on software package to PQView called FaultPoint Set up a database link to our exiting saved relay events thru IT that would enable the use of Synergy models to populate algorithms to calculate fault locations based on system parameters and protection relay event logs This proposal includes the cost to fund the purchase and set up the required support from IT and database storage space in order to store system data for software analysis. Project Objectives To identify, locate and repair underground faults within minimal time, limiting customer outage times. This will improve overall system response times and minimize repair times having a direct effect on SAIDI and CAIDI	Labor-L01	107010	1
CS002641	Putnam 25C – Remove deenergized sub	This project will decommission and retire Putnam 25C substation located in Putnam, CT. CS002841	Carmel Hill Add 2nd Xfmr + SWGR	This project proposes the addition of the second 115/23kV/62.5MVA transformer (11K2S), with associated switchgear. Carmel Hill 11Kis Woodbury, CT is a 115/23kV Substation with one (1) distribution transformer and one (1) switchgear that has three (3) feeders. A second distribution transformer and switchgear are required to improve reliability by increasing the contingency load carrying capability of the substation and feeders. Eversource's "1500 PLAN-0101 Bulk/Distribution Substation Assessment Procedure" specifies the need for a second transformer to keep the substation loading below 75% of the existing transformer's nameplate rating. The new Windsor SOC will be designed like the Mass Ave Control Room to support a physical layout and system visualization tools that encourage communication and visibility between desks. This model has been identified as an industry best practice. Once constructed, the new Windsor SOC will improve our operational efficiency, meeting NERC-CIP best practices. The audio and video display systems will increase operational awareness and efficiencies to include a Human Performance centric design needed to operate the modern distribution system and the distribution grid of the future. Additionally, the video wall display boards will enhance overall awareness by leveraging current and new graphical user interfaces as they become available; this will enhance operations ability to assess and analyze system events. This PAF scope of work includes the purchase, installation, and configuration of Computer, Audio-Visual, and KVM (Keyboard, Video, and Mouse) equipment which must be purchased to outfit the SOC with technology needed for system operations. FRAD1D01	FRAD Installation CT	Work order is to be used to capture costs for retrofitting relays for network protectors This project will be covering the installation of new FRAD equipment in Berlin and Mass Avenue Data Centers. The FRADs take RS-232 serial circuits and transports them in frame relay packets. Frame relay, combined with the RS-232 serial connection and the Multiprotocol Label Switching (MPLS) pseudo wires, are the chosen solution to transport SCADA to multiple data centers simultaneously. This project is in coordination with the eECS project	Labor-L01	107010	1

		Eversource Open Sky data network support critical Distribution Automation applications in CT. These radios have now been manufacturer discontinued. In order to have mobile radios to continue supporting Distribution Automation in CT, a last time buy of radios is needed. A budget of $1.2M was set aside for this purpose as a short-term mitigation to keep the system in operation till a new replacement system is identified as part of the Field Area Network Strategy.
