CS002391	Williams 9L – Network Monitoring Sy	This project is the substation component of installing the Digital Grid network remote monitoring system. This project in conjunction with CD00828 and CD00948 will prolong the useful life of the network protector and transformer by allowing the system to notify System Operators when conditions such as network protectors pumping or cycling, loss of protector pressure and the presence of water occurs. Overall, these projects are focused on enabling Eversource to increase network protector's reliability and defer network protector's major maintenance from a 2-year cycle to a 4-year cycle, thus reducing resource impact on Operations. This project involves the following work within the Williams 9L fence: installation of 4 coil sensors (one on the getaway cable of every network feeder), installing a receiver cabinet in the control house, installing a DNP interface, commissioning the system, 2 years of web portal access, and 2 years of engineering support. CS002631	PILOT PROG FEEDER FAILURE DETECTION	Southeast Hartford 47N substation in Hartford, CT is a 115-23kV substation built in 1972. While a few pieces of equipment have been replaced over the last 45 years, most equipment is original. There are nine (9) 23kV oil circuit breakers that need to be replaced, in addition to the circuit breaker isolation switches and drives, mechanical relay control for transformer, bus and feeder protection. Besides the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal/bird protection for reliability purposes. In addition to these equipment replacements, 115kV Circuit Switchers need to be added for the two transformers to address a transformer switching restriction that prohibits energizing or de-energizing the two 40/60/80 MVA transformers with the 115kV disconnect switches. To purchase an add-on software package to PQView called FaultPoint Set up a database link to our exiting saved relay events thru IT that would enable the use of Synergy models to populate algorithms to calculate fault locations based on system parameters and protection relay event logs This proposal includes the cost to fund the purchase and set up the required support from IT and database storage space in order to store system data for software analysis. Project Objectives To identify, locate and repair underground faults within minimal time, limiting customer outage times. CS005951	PI Vision Transformer Monitor Repl	This project will replace transformer monitoring displays used by the substation technical engineering group to monitor asset health real-time by visualizing data collected using online equipment monitors. An external vendor will be funded to create these displays in PI Vision, an existing visualization tool on the Eversource network. A new PI Asset Framework database will be developed. The structure of the dashboard includes an Overview page and nine sub-pages. The objective of the Overview page is to provide users a quick look at the health of each transformer and to highlight via color coding the potential issues to be investigated further. CS009048	DSCADA LTC Controls Upgrade	Furnish necessary engineering and design to replace existing radio-controlled Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System at various Eversource Connecticut substations. The system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. The DSCADA signal will be transmitted via radio from the control house to the LTC receiver, to avoid the expense of adding additional conduit, if no conduit is available. If conduit is available, the devices will be connected via fiber cable. Project Scope: Oxford 26N Furnish necessary engineering and design to replace existing radio-controlled Transformer Load Tap Changer (LTC) Voltage Reduction System with a DSCADA controlled LTC Voltage Reduction System. This system is used to lower the Distribution voltage (2% or 5%) during certain Transmission contingencies to help stabilize the system. Provide additional LTC control capability for the new DSCADA system so the voltage of individual LTCs can be raised/lowered by the SOC to satisfy field conditions. Ability to provide the tap position of the LTC and to remotely turn off regulation so the LTC does not react during switching.	Other Misc Acct-A01	107010	1

		A project authorization for $19,994,000 is being requested to fund the IT Scope of Work to support the construction of a new CT Distribution System Operation Center (SOC) at the existing Windsor Facility. The new Windsor SOC will be designed like the Mass Ave Control Room to support a physical layout and system visualization tools that encourage communication and visibility between desks. This model has been identified as an industry best practice. Once constructed, the new Windsor SOC will improve our operational efficiency, meeting NERC-CIP best practices. The audio and video display systems will increase operational awareness and efficiencies to include a Human Performance centric design needed to operate the modern distribution system and the distribution grid of the future. Additionally, the video wall display boards will enhance overall awareness by leveraging current and new graphical user interfaces as they become available; this will enhance operations ability to assess and analyze system events. This PAF scope of work includes the purchase, installation, and configuration of Computer, Audio-Visual, and KVM (Keyboard, Video, and Mouse) equipment which must be purchased to outfit the SOC with technology needed for system operations.

OPENSKY1	Open Sky Last Time Buy	Eversource Open Sky data network support critical Distribution Automation applications in CT. These radios have now been manufacturer discontinued. In order to have mobile radios to continue supporting Distribution Automation in CT, a last time buy of radios is needed. A budget of $1.2M was set aside for this purpose as a short-term mitigation to keep the system in operation till a new replacement system is identified as part of the Field Area Network Strategy.
