		This project is the substation component of installing the Digital Grid network remote monitoring system. This project in conjunction with CD00828 and CD00948 will prolong the useful life of the network protector and transformer by allowing the system to notify System Operators when conditions such as network protectors pumping or cycling, loss of protector pressure and the presence of water occurs. Overall, these projects are focused on enabling Eversource to increase network protector's reliability and defer network protector's major maintenance from a 2-year cycle to a 4-year cycle, thus reducing resource impact on Operations. This project involves the following work within the Williams 9L fence: installation of 4 coil sensors (one on the getaway cable of every network feeder), installing a receiver cabinet in the control house, installing a DNP interface, commissioning the system, 2 years of web portal access, and 2 years of engineering support. This project was approved on 11/17/2016 for $31,000 with an with an overall estimate of $306,255.

CS002581	SW Hartford 47N Replace 9 OCBs	Southwest Hartford GN substation in Hartford, CT is a 115-23kV substation built in 1973. While a few pieces of equipment have been replaced over the last 45 years, most equipment is original. There are nine (9) 23kV oil circuit breakers that need to be replaced, in addition to the circuit breaker isolation switches and drives, mechanical relays used for transformer, bus and feeder protection. Besides the need to replace aging equipment, multiple animal outages have highlighted the need to improve animal/bird protection for reliability purposes. In addition to these equipment replacements, 115/23 Circuit Switchers need to be added for the two transformers to address a transformer switching restriction that prohibits energizing or de-energizing the two 40/44/80 MVA transformers with the 115kV disconnect switches. CS002841	Carmel Hill Add 2nd Xfmr + SWGR	This project proposes the addition of the second 115/23/kV 62.5 MVA transformer (11K-2X), with associated switchgear. Carmel Hill 11F in Woodbury, CT is a 115/23kV Substation with one (1) distribution transformer and one (1) switchgear that has three (3) feeders. A second distribution transformer and switchgear are required to improve reliability by increasing the contingency load carrying capability of the substation and feeders. Eversource's "SNS PLAN-010 Bulk Distribution Substation Assessment Procedure" specifies the need for a second transformer to keep the substation loading below 75% of the existing transformer's nameplate rating. 		A project authorization for $19,994,000 is being requested to fund the IT Scope of Work to support the construction of a new CT Distribution System Operation Center (SOC) at the existing Windsor Facility. The new Windsor SOC will be designed like the Mass Ave Control Room to support a physical layout and system visualization tools that encourage communication and visibility between desks. This model has been identified as an industry best practice. Once constructed, the new Windsor SOC will improve our operational efficiency, meeting NERC-CIP best practices. The audio and video display systems will increase operational awareness and efficiencies to include a Human Performance centric design needed to operate the modern distribution system and the distribution grid of the future. Additionally, the video wall display boards will enhance overall awareness by leveraging current and new graphical user interfaces as they become available; this will enhance operations ability to assess and analyze system events. This PAF scope of work includes the purchase, installation, and configuration of Computer, Audio-Visual, and KVM (Keyboard, Video, and Mouse) equipment which must be purchased to outfit the SOC with technology needed for system operations.

FRAD1D01	FRAD Installation CT	This project will be covering the installation of new FRAD equipment in Berlin and Mass Avenue Data Centers. The FRADs take RS-232 serial circuits and transports them in frame relay packets. Frame relay, combined with the RS-232 serial connection and the Multiprotocol Label Switching (MPLS) pseudo wires, are the chosen solution to transport SCADA to multiple data centers simultaneously. This project is in coordination with the eECS project	Reimbursables-R02	107010	1

OPENSKY1	Open Sky Last Time Buy	Eversource Open Sky data network support critical Distribution Automation applications in CT. These radios have now been manufacturer discontinued. In order to have mobile radios to continue supporting Distribution Automation in CT, a last time buy of radios is needed. A budget of $1.2M was set aside for this purpose as a short-term mitigation to keep the system in operation till a new replacement system is identified as part of the Field Area Network Strategy.
