Dear PURA Commissioners,
My husband and I installed a heat pump and added insulation to our attic this year. We figured it was a good investment for us personally, and good for the environment even though it meant taking out a loan. Now Eversource wants to bully us into the biggest distribution rate increase in the state's history. They reported more than $1 Billion in profits in the first nine months of the year and yet they are asking for about 50% more in distribution revenue. That could result in an 18% increase in the average customers' bill!

Adding insult to injury, they are also seeking permission to increase their allowed return on equity from 9.25% to 10.25%! They want us to pay more while they increase their rate of profit on investments.

Connecticut families already pay some of the highest electric bills in the country, and another $33 a month, or almost $400 a year is just not affordable for many households.

It does us no good to make energy saving improvements to our homes if Eversource is allowed to continue to slap higher charges on our bill.

We urge you to reject these rate increases and put Eversource under the closest supervision. Please prioritize Connecticut families over corporate profits.

Thank you,
Maricela Perazabaker
