Subject: Eversource's application for rate review

I strongly recommend that PURA does not approve Eversource's rate increase. Connecticut already pays some of the highest electric rates in the country.

Especially in light of recent comments from their CEO:

“Sure. Yeah, we have plenty of opportunities. We did; we just shut the faucet off in Connecticut. You know, until we got paid out, until we get the storm cost, we weren’t going to put another dime down there.”

CEO Joseph Nolan makes over 13 million a year as CEO (not to mention his other compensation from other boards/companies) while Connecticut residents are struggling to pay their bills.
