RE: Significant Environmental Hazard
CL&P East Hampton Service Center
22 East High Street, East Hampton
Haz ID 836
Rem ID 10989

Dear Ms. Voisine-Shea:

The Remediation Division of the Department of Energy and Environmental Protection (the "Department" or "DEEP") has reviewed the report of actions taken to address an environmental hazard entitled "Eversource East Hampton Area Work Center – Significant Environmental Hazard Status Update" ("the Report"), dated November 4, 2019, prepared for Connecticut Light & Power, dba Eversource Energy, by Weston & Sampson Engineers, Inc., and received on February 24, 2026. The Report was prepared in response to the Department's April 23, 2012 acknowledgement of a report of a significant environmental hazard condition. Notification of the significant hazard was received by the Department on April 10, 2012, and described a condition where pollution detected in groundwater above standards may threaten a drinking water well at CL&P East Hampton Service Center, located at 22 East High Street in East Hampton. Specifically, Extractable Total Petroleum Hydrocarbon (ETPH) was detected at a concentration of 19,000 milligrams per liter (mg/L).

The Report describes the removal of the source and follow-up monitoring of groundwater and nearby potable wells undertaken to evaluate or abate the environmental hazard. It includes results of a monitoring program demonstrating that the statutory significant environmental hazard condition does not, in fact, exist.

The aspects of the Report that pertain to evaluation, mitigation, or abatement of the reported significant environmental hazard are hereby approved under the provisions of Section 22a-6u(k) of the Connecticut General Statutes (CGS).

Under the provisions of Section 22a-6u(k) of the Connecticut General Statutes (CGS) this letter certifies that the Department has determined, based on the information in the Report, that the

Certification of Compliance C.G.S. 22a-6u

significant environmental hazard has been satisfactorily resolved, and no further response action for the reported condition is required, for the following reasons:

- There is no longer a groundwater plume above criteria that threatens supply wells; and
- None of the threatened supply wells were impacted by the release.

Please note that this letter pertains **solely** to the identified significant environmental hazard condition. This letter does not establish either a basis for determination that your site is 'clean', or a basis for resolution of any prior Form III filing under the Property Transfer Program pursuant to CGS Section 22a-134 et. seq. The evaluation of a release area or property to determine if it is in compliance with Connecticut's Release Based Cleanup Regulations (RBCRs) is a separate and distinct activity from identification and resolution of an environmental hazard condition, although the same data may be used for both, as appropriate, and in accordance with each statute and regulation. Both of these activities, resolution of a significant environmental hazard and remediation of related pollution, are required, under separate laws. In any event, the Department expects you to continue implementing remedial activity to achieve closure of site issues.

Nothing in this letter shall affect the Commissioner's authority to institute any proceeding or take any other action to prevent or abate pollution, to recover costs and natural resource damages, and to impose penalties for violations of law including but not limited to violations of any permit issued by the Commissioner. No provision of this letter and no action or inaction by the Commissioner shall be construed to constitute an assurance by the Commissioner that the described actions will result in permanent abatement of the environmental hazard. If at any time the Commissioner determines that the actions taken have not successfully abated the identified environmental hazard, the Commissioner may institute any proceeding or take any action to require further action to mitigate or abate the hazard. This letter relates only to evaluation, mitigation or abatement actions, for the significant environmental hazard identified, as described in the above referenced Report.

In addition, nothing in this letter shall relieve any person of his or her obligations under applicable federal, state, or local laws or regulations. If you have any questions, please contact Peter Zaidel by phone at 860-424-3424 or email at Peter.Zaidel@ct.gov.

Sincerely,

Raymond Frigon
