Date Filed: September 22, 2026

Witness: Amparo Nieto
Request from: Public Utilities Regulatory Authority

Question:

(ACOS) Application, Ex. CL&P-ACOS-2, pp. 107 – 112, ln. 44. Explain what the meter plant weight external allocator represents and address why the total system meter plant weight is 1.0 and the combined customer rate class percentages total 96%.

Response:

The allocator labelled "MTR_WF" can be found in the tab "Appendix 1.A. Allocator" and it represents the meter reading costs allocator, i.e., used in the study to allocate Account 902. The combined customer rate class percentages in the Exhibit CLP-ACOS-2 (Excel model), add up to 100% across all customer classes.
