Date Filed: September 15, 2026

**Witness: Edward A. Davis and Kimberly R. Parsons**
**Request from: Office of Consumer Counsel**

**Question:**

(Rate 6 – Residential Space Heating Rate) Refer to Exhibit CLP-RATES-1, at 33, which indicates that Rate 6 customers will receive a distribution energy rate 4.7 cents/kWh lower than Rate 1 for heating season usage above 700 kWh, and 2.8 centers/kWh lower during all other hours. Please provide the revenue impact calculation underlying these discount amounts by season and usage tier, including any sensitivity analysis across different enrollment and load scenarios.

**Response:**

As this rate is not in effect, there are no customers enrolled to perform such impacts. The design and changes to volumetric rates and customer charges rates are based on the same distribution revenue requirement. The typical bills and comparison of bills for the distribution portion of service under Rate 1, and Rate 6, across a range of monthly usage levels are provided in Exhibit CLP-RATES-6, page 3 of 3.
