Dear PURA executives ,

I would like to voice my outrage at the notion of EVERSOURCE to even propose a delivery rate increase , rates are already way to high .

The electrical infrastructure is antiquated and needs to be upgraded from third world standards to modern below the ground lines much like in all of western Europe . Such sadly is not proposed to justify any cost hike . (Please do not tell me that powerlines can not be put below ground all over the state . It was done so in East Germany after the German Reunification , it can be done here !)

It requires integrity and dedication to your community !

We would be more likely immune to storm related power outages. It would ensure a more reliable flow for the state economy that gets severely impacted by storm related outages . As a business owner I have experienced my share of such .

Maintenance of the power grit would become more cost efficient with no longer needing the tree trimming companies and hiring emergency crews , paying overtime with the more frequently occurring storms . And it doesn't even just take storms any longer to interrupt the flow of electricity as we have several species of trees dying and crashing down onto those lines whenever it suits them .

No rate increase until a comprehensive overhaul is engineered !

Best Wishes,

Bianka Langner Griggs
