Hello,

I recently received a letter from Eversource with calculated proposed rate changes. The calculations are very misleading. For example using a KWh of 1587 and the rates listed under the residential type:

Current rates:

9.62 + 92.74 + 32.23 + 0.17= $**134.76**

proposed rates:

12.36 + 193.55 + 0 + 0 = $ **205.91**

percent change calculation should be new value minus old value divided by old value

Actual percent change = **52.8% ($71.15)**

This will be very impactful especially during winter months.

Please review the proposed rates carefully. I think these proposals are outrageous.
Thank you - Gretchen
