Usage Estimation Procedure

Eversource Connecticut Electric

To create estimated electric usage for billing when an actual usage is not available, the Company's automated IT system processes performs the following steps:

I. Determine if there was **actual use for the same period previous year**.

A. IF YES:

1. The per-day use for the prior period is calculated by dividing the prior period usage by the number of days in the period and;

2. That per-day use is multiplied by the number of days in the current bill cycle.

B. IF NO:

1. Determine if there was **actual use last month**.

a. IF YES:

- The prior month's per-day use will be calculated by dividing the prior month's usage by the number of days in the prior month period and;

- That per-day use is multiplied by the number of days in the current bill cycle.

b. IF NO:

- An exception will be generated to manually calculate estimated usage.
