Comments on Docket No. 26-08-04
Annual Shared Clean Energy Facility Program Review – Year 8
Request for Written Comments

Andover Energy is a developer of commercial solar and storage projects headquartered in Connecticut. We appreciate the opportunity to submit the following comments:

2 – Budget Reallocation:

- With fuel cells no longer being an eligible technology for participation in the SCEF application process, the Year 8 SCEF program budget should revert back to the typical 80/20 split between Eversource/UI. This will facilitate the best opportunity for the Year 8 SCEF solicitation to procure the most capacity at cost effective rates for ratepayers, without some capacity going un-utilized in the last program year.

3 – Bid Preferences:

- We recommend the Authority retain the same bid preferences for Year 8 as were adopted for Years 6 and 7, as these levels provide these preferred sites types the opportunity to participate in the SCEF program at rates that are still reasonable for ratepayers.

We appreciate the Authority's consideration of these comments.

Sincerely,

JP Schwartz
