Date Filed: October 28, 2026

Witness: Rice, Brian J
Request from: Public Utilities Regulatory Authority

Question:

Eversource Comments, Oct. 2, 2026, pp. 6–7. Provide references to the relevant program information for the renewable dispatch generation (RDG) agreements in Hawaii and solar plus storage power purchase agreements (PPAs) in Nevada. Under those programs, explain how any per-kW payment levels for storage dispatch are determined.

Response:

The materials referenced by the Company on p. 7 of its Oct. 2, 2026 comments are provided as Attachment 1 and 2 to this response.

The MPF proposal does not wholly duplicate either the Hawaii Renewable Dispatchable Generation (RDG) or Nevada Solar + Storage agreement structure. However, both examples demonstrate that separately compensating or otherwise evaluating generation and storage resources based on different performance attributes can effectively support the deployment of such resources.
