Date Filed: August 28, 2026

Witness: RUNYON, JENNIFER M
Request from: Public Utilities Regulatory Authority

Question:
Estimate the number of EVs that have been approved by the EDCs for export to date, broken out by residential and commercial customer classes.

Response:

The Company may approve EV chargers for export rather than individual EVs.

There are zero bidirectional EVs or chargers that have applied for interconnection and been approved for export to the grid in Eversource territory.

There is one bidirectional EV charger in Eversource territory that has applied for interconnection and was approved as a non-export system.

The number of EV chargers approved for export has not changed since Eversource responded to a similar question in Docket No. 25-08-05, *Annual Energy Storage Solutions Program Review - Year 5*, on September 12, 2025, Q-CAE-37.
