Date Filed: October 30, 2026

Witness: Boughan, Kevin; and Morris, Brian
Request from: Public Utilities Regulatory Authority

Question:

Avangrid Corresp. Oct. 9, 2026, Joint EDC Presentation, p. 12. Provide an updated DCFC map that includes the pipeline of 413 DCFC projects in the queue. The updated map should clearly identify the projects that have not yet been built. Further, the map should be accompanied by the projects' projected completion date.

Response:

At the time of submission of the 2026 Annual Report, and as presented in the Joint EDC Presentation, there were 413 ports across nearly 80 locations in the queue of known projects participating in incentive-based programs, including the CT EV Program, the National Electric Vehicle Infrastructure (NEVI) Program and the Charging & Fueling Infrastructure (CFI) Grant Program. This total did not include privately-funded projects.

Given the dynamic nature of project development and viability, the known project queue has since changed. As of this response, there are 352 ports across 69 locations in these same programs. The updated map, included as CAE-002, Attachment 1, reflects the most current project information available. Where known, estimated project completion dates are provided in Attachment CAE-002, Attachment 2.
