Date Filed: August 17, 2026

Witness: Rice, Brian J, Danahy, Julia G
Request from: Public Utilities Regulatory Authority

Question:

Id. Provide a list of multi-family affordable housing (MFAH) approved through the RRES Program to date. For each MFAH project, provide the year approved, size (kW AC), number of units served, MFAH tier, and whether the siting requires a new service at a separate interconnection point from the existing building load.

Response:

Please see Attachment 1, which includes a list of all Residential Renewable Energy Solutions ("RRES") MFAH applications that have received Contingent Approval to date, including the year approved, size (kW AC), number of units served and MFAH tier. Note there may be multiple approved applications for a single property, as one application is required per interconnection point. This data is a direct export from PowerClerk and includes installer-input data on the number of units. Some projects with multiple applications have entered the total units on every application, while some have broken out the number of units by interconnection point.

Eversource has not identified any currently approved projects that require a new service at a separate interconnection point from the existing building load; however, the Company has engaged in discussions on prospective projects that may meet this criteria.
