Date Filed: April 10, 2026

Witness: Freeman, Lavelle A
Request from: Process Monitor

Question:

In the response to DER Requirement #2 (Attachment 13), it was indicated that "Fuel Cell" deployment is projected. Please provide more details on the specific technology being referenced in this instance.

Response:

In its DER Requirement #2 response (Attachment 13), the Company used the term "Fuel Cell" to describe a category of distributed generation technologies rather than a single, specific fuel cell technology. The Company is generally technology-agnostic and evaluates interconnection requests based on compliance with applicable generator interconnection requirements.

At present, the Company has received interconnection requests involving the following fuel cell technologies:

- Molten Carbonate Fuel Cells (MCFC)
- Solid Oxide Fuel Cells (SOFC)
- Phosphoric Acid Fuel Cells (PAFC)
