RE: Generator Approval for North Haven 370 Bassett RD

Dear Salvatore Filardi:

The United Illuminating Company (UI) witnessed the operational testing of the 920 kW natural gas fuel cell generator system by Sarracco Mechanical Services on 5/26/2026 at 370 Bassett RD in North Haven, CT consisting of:

Manufacturer	Model	Quantity
HyAxiom	PureCell Model 400	2

Based on the test results and inspection of the inverter generator system, UI approves the parallel operation of the generator system with our local distribution system. The generator system as installed and approved by the local electrical inspector, does comply with UI's interconnection requirements. Any modifications or changes to the electrical characteristics of the generator system and/or interconnecting facility will void this approval and must be brought to UI's attention for review and approval prior to the change. This approval is contingent upon on going compliance with UI's Interconnection Guide FT&Study - 20-December-2023.

If you have any questions, please email generator.connection@uinet.com.

Sincerely,

Charles J. Eves
Vice President Electric Systems Operations,
The United Illuminating Company
