Description

GBC Foton 30 is an automatic laminator with an auto-cartridge that makes the laminating process virtually effortless. With its advanced auto-threading film cartridges, the Foton 30 eliminates the need for manual pouch feeding, saving you up to 98% of your time compared to traditional methods. The laminator cartridges are easy to load and can only load one way, eliminating loading errors. With three different mode options, you can laminate letter-size pages, oversize documents, and odd shapes without requiring lamination pouches.
